## Awesome projects

not all of my projects but it's just products that made me very proud to say,  
*"i had shared building it"*

### ★ Waseet.net

**Website + Scraping tool + Round robin tool + ADS Reports + Big Data handling** waseet.net was an platform handled website & mobile app for users based on directory and ads listing with many type of ads , on background there is an dashboard for operation team handled ads review and reports for ads + with scraping tool scrap all competitors data using and rewrite its content using **Chat GPT** and send it back to operation team , i was refactoring and optimize this old project using microservices from the development side and downgrade AWS service and update its version

### ★ SpiderSEO

**ERP + CRM + HRM** + accounting module with full +task management + autopilot task assigning with **AI** that make the decision to assign task for any employee +integration with all famous saas apps in Estore + plugins for famous **CMS**'s all in one application , it helps customers to pack up there products data with ability to move it between any other platform , and also system analysis these data and check the bugs in there to catch the bugs and recommend SpiderSEO services to handle this issues ,customers orders transferred to be tasks , and tasks calculate employees salaries.

### ★ ERP

ERP system build on microservice concept

### ★ CEC

ERP for printing fields with a very complex product variation that had deep nested options , built on big data , microservices concept and **AI**.

★ **O-SMU**

restaurant management system that handles the relation between the client and restaurant, restaurant and employees , with a reporting system.

★ **PetroApp**

An famous app working in KSA working as solution to make companies track their vehicles filling fuel process and washing using laravel

★ **Flexi Gigs**

★ Freelance stage manage the process between customer and supplier build by laravel

★ **Havebooked**

★ Realestate app manage the relation between companies , employees and customers

★ **B-system**

★ CRM application built from scratch using codeigniter

★ **Megalab**

My first web app and am still improving it until now it's a simple font end with a follow up page for your tests and a web application in the back end for rolling all of the lab functions like patent system ,lab dashboard, back end for the front end, HR system, Secret area ,multi-level permeations , Accounting system, SEO, raw material manager and lots of awesome things

★ **Erased**

Crawler system search for the latest news in the news sites and get the all of the news that I need.with voice to text plugin
